New air treatment units series

Easy assembly, flexibility, design, performance and competitive pricing; these are just some of the main features of the new Pneumax Spa FRL units.

The AIRPLUS series has been designed with the aid of the latest design and manufacturing technologies in order to achieve high performance and to simplify and speed up the installation process.

The new modular structure and connecting system based on dedicated technopolymer flanges ensure maximum flexibility and easy, fast installation. This new system allows the replacement, addition, or removal of one or more modules without the need to disassemble the entire unit.

The use of high performance technopolymer materials, combined with the latest design technologies, has resulted in a low weight, high performance product.

Optimization of the internal flow path, with careful revision of all inner components and the introduction of innovative technical solutions has resulted in enhanced flow rates, that in some cases reach 50% over previous models, and the inclusion of new additional features.

Besides the more conventional units, such as the filter, pressure regulator, and lubricator; other functions such as a lockable manual shut-off valve, an electrical or pneumatic shut-off valve, a soft start valve, an air take off, and a pressure switch are also available.

The new AIRPLUS series is available in three sizes with either moulded technopolymer threaded connections or with threaded metal inserts in sizes G1/8" to G1/2" and with flow rates up to 5,000 NI/min.

treatment components

"on air"

is subject to change without prior notice

MATERIALS

High performance technopolymer ensures high flows, light weight and reliability.

Moulded technopolimer threaded connections or alternatively threaded metal inserts

DESIGN, PERFORMANCE AND RELIABILITY

New eye catching design. Performance increased by up to 50% compared with the previous series.

NEW

BUILT IN PRESSURE GAUGE

A dedicated built in pressure gauge which ensures space savings is available as an alternative to the conventional pressure gauge for the pressure regulator and filter regulator.

New full range of air

Innovation

Con riserva di modifiche / Specifications may vary

EASY AND FAST INSTALLATION

Modules are coupled together using quick connecting technopolymer flanges (locked with just one screw) which include the option to panel mount.

FLEXIBILITY

The modular structure ensures maximum flexibility. The assembly, disassembly or removal of a component from the FRL group can be easily carried out without the need of removing the group from its mounting position.

NEW

OIL REFILL

The lubricator (size 2 & 3) can be refilled while the unit is pressurised simply following three steps as indicated

- unscrew plug ①
- remove bowl ②
- Refill ③
- re assemble the bowl ②
- screw plug ①
